Team Lead

Software Engineering
Design Project: E-commerce

2025

I was the team lead of a semester long project for a software engineering course. Our project involved designing an application for E-commerce. Each member of the team was responsible for a part in the process of shopping online. For this project, I was tasked with implementing the pages and functionality for searching and selecting products. The course required multiple reports throughout the semester, which required coordination between my team. I was in charge of organizing my team's work to ensure we're progressing as expected.

Education

California State University Northridge, 2023

Bachelor of Science in Computer Science

St. Genevieve High School, 2019-2023

High School Diploma
